

You can even have VELUX skylights that comply with the standard required for building in bushfire prone areas.

AS3959 specifies requirements for the design and construction of buildings in bushfire prone areas in order to improve their performance when subjected to burning debris, radiant heat or flame contact generated from a bushfire.

VELUX High Performance skylights* and roof windows have been tested to one of the highest levels - bushfire attack level 40 or BAL40 - and passed. This requires the skylights to be exposed to a staggering 930 degrees celcius heat source for 10 minutes!

* Skylight only. Custom-made flashing required.
